

Appendix H: The final ACWP survey - Year 6

This is an appendix to the following report:

Lietz, P., O'Grady, E., Tobin, M., Young-Thornton, J., Popple, H., Hamilton, M., McEntee, A. and Redmond, G. (2014). *The ACWP national survey: Sampling, permissions and logistics Phase Four Report for the Australian Child Wellbeing Project*. Flinders University, the University of NSW and the Australian Council for Educational Research. www.australianchildwellbeing.com.au

Year 6 Survey Screenshots

The Australian Child Wellbeing Project (ACWP) was a child-centred study in which young people's perspectives were used to design and conduct Australia's first major nationally representative and internationally comparable survey of wellbeing among children aged 8-14 years. Particular attention was given to understanding the perspectives of six groups of young people with specific experiences and needs that may have a bearing on their wellbeing: Aboriginal and Torres Strait Islander young people, culturally and linguistically diverse young people, young people with disability, young people in regional and remote Australia, economically disadvantaged young people, and young people in out-of-home care. The overarching aim of the ACWP was to arrive at profiles of different groups of Australian young people in the middle years in terms of their wellbeing, with a particular focus on disadvantaged young people. The survey also aimed to benchmark child wellbeing in Australia and provided information to contribute to the development of effective services for young people's healthy development.

The project was conducted by a team of researchers at Flinders University of South Australia, the University of New South Wales, and the Australian Council for Educational Research.

This document presents the screenshots of the final ACWP online survey as viewed by **year 6** students. This survey was conducted in a national sample of primary and secondary schools in term 3 of 2014.

For each screen/question the following details are provided:

1. The indicator label as in the ACWP data set
2. The variable name as in the ACWP data set
3. The branching rule if applicable
4. If the question was mandatory or not
5. The source of the question (ACWP authored or from another existing survey)

In the case of questions that were drawn from existing sources, appropriate and official permission had been granted to use those questions in the ACWP survey.
